- [About KAM](#)

KAM has two different programming philosophies for programming decoders, a simple programmer (Engine Commander® software) and a fully function do everything programmer (Decoder Commander).

Engine Commander implements a basic programming capability for programming decoders. Engine Commander allows you to read and write CV's, program decoder address and speed curve. There are no templates to determine what decoder model you are running, nor support for advance DCC programming or file operations. Engine commander programming is a simple programmer, allowing you to read and write CV's to your decoder.

Decoder Commander is a serious DCC programmer that allows you to do everything that Engine Commander does plus configure advance decoder functions, clone decoders, customize speed curves, configure advance function mapping and create customize decoder templates. Decoder Commander allows you full access to the manufacture specific decoder information so you may customize the decoder as you see fit

- [Tech Notes](#)

Decoder Commander is an application that runs on your desktop or laptop PC. The desktop or laptop PC is connected to a layout using a command station interface. The interface is usually a serial interface or USB device.

Decoder Commander can read third party decoder templates using our Smart Decoder® editor. The smart decoder editor allows you to read third party templates, create your own decoder template and verify existing Decoder Commander templates.

To use this feature, download KAM's Smart Decoder Template utility form our download area and convert the 3rd party templates to a Decoder Commander format. This utility is not included in the Train Tools software release. The smart decoder utility verifies the template information and adds additional information that is needed to be used by Decoder Commander.

Note: Before you convert any third party template, you will need to verify that the 3rd party template license agreement allows you to run the smart decoder conversion utility on the 3rd party template. Kam software supports Microsoft current operating systems, Win CE (PC2002-03, Mobile 5.x), Win 200x, Windows XP and .NET servers.
